QUANTARA SYSTEMS

QS1 · SYSTEMATIC EXECUTION FOR COMEX GOLD FUTURES

Discipline, engineered.

QS1 is an autonomous execution system for COMEX gold futures. It analyzes market conditions, enforces pre-trade risk limits and executes every order by rule, removing the largest single source of error in active trading: human discretion.

MARKET	COMEX gold futures
EXECUTION	Fully automated, rules-based
RISK CONTROLS	Four independent layers
OVERSIGHT	Monitored every session
ACCESS	By consultation, limited capacity

01 · THE PROBLEM

Most trading losses are behavioral, not analytical. A sound strategy is rarely what fails. What fails is its execution: the entry taken late, the target moved out of greed, the stop widened after a loss. These are not gaps in knowledge. They are the predictable limits of human judgment under pressure.

02 · THE PROCESS

01 **Ingest** — Reading the market as it moves.
02 **Classify** — Deciding whether to trade at all.
03 **Evaluate** — Rules, not opinions.
04 **Verify** — Every order must earn its way out.
05 **Execute** — Entry, stop and target, together.
06 **Manage** — Managing the trade to the end.

03 · RISK ARCHITECTURE

L1 **Trade** — Every position has a hard stop.
L2 **Session** — Daily limits end the day early.
L3 **Account** — Drawdown rules respected by design.
L4 **System** — A kill switch above everything.

04 · ENGAGEMENT

01 **Private consultation** — A 45-minute conversation about your goals and experience, and whether QS1 is the right fit. No obligation.
02 **Account setup** — We guide you through opening a funded futures account that meets QS1's requirements, step by step.
03 **Secure connection** — You share execution-only credentials through an encrypted intake. Your account is configured and connected.
04 **QS1 goes live** — The engine begins trading your account by rule, with our team monitoring every session.

COMPATIBILITY

Proprietary trading firms: Topstep, Lucid Trading, Take Profit Trader. Execution and analysis platforms: Tradovate, NinjaTrader, TradingView.
