QS1 · SYSTEMATIC EXECUTION FOR COMEX GOLD FUTURES

A process, not a prediction.

QS1 is proprietary execution software for COMEX gold futures. It evaluates market conditions through a defined confluence framework, qualifies each entry against predefined conditions, then executes and manages the trade by rule.

MARKET	COMEX gold futures (GC, MGC)
EXECUTION	Automated, rules-based
QUALIFICATION	Defined confluence conditions
RISK	Parameters set before entry
RECORDS	Every event time-stamped

01 · THE PROBLEM

Most trading losses come from execution. The strategy is usually sound. Late entries. Targets moved out of greed. Stops widened after a loss. Valid setups skipped after a losing streak. Each mistake is small on its own. Across hundreds of trades, they decide the result. QS1 is built to carry out a defined process the same way on every trade.

02 · THE PROCESS

01 **Ingest.** Read the market as it moves.
02 **Classify.** Confirm the conditions are right.
03 **Evaluate.** The confluence framework decides.
04 **Verify.** Every order is checked before it is sent.
05 **Execute.** Entry, stop and target go out together.
06 **Manage.** Each trade is managed through to exit.

03 · RISK ARCHITECTURE

L1 **Trade.** Every position has a protective stop.
L2 **Session.** Daily limits end the session.
L3 **Account.** Drawdown rules built into sizing.
L4 **System.** Operating conditions and override.

04 · ENGAGEMENT

01 **Private walkthrough.** A 45-minute session covering the QS1 framework, your goals and whether QS1 fits. No obligation.
02 **Account setup.** We guide you step by step through opening a futures account that meets QS1's requirements.
03 **Secure connection.** You share execution-only credentials through an encrypted intake. We configure and connect your account.
04 **QS1 goes live.** The engine starts trading your account by rule, and our team monitors every session.

COMPATIBILITY

Proprietary trading firms: Topstep, Lucid Trading. Execution and analysis platforms: Tradovate, NinjaTrader, TradingView.
